

INFO-TECH n. 06/23 – 04/10/2023

Sbj: Jets for Tillotson HW and HB carburetors.

During a screening on the production, we have detected the total length to be slightly different than what is reported on the several fiches. This is caused by the manufacturing of the jets in two assembled parts, the screw and the handle.

In agreement with Tillotson the indication of the total length on the fiches is updated as in the picture hereinafter:

The fiches are being updated in this way for 2024.

Sbj: Main bearings (ball bearings) for 60cc engines.

Due to the difficulties found in sourcing the components, we sometimes need to have alternative suppliers for many components. As the main bearings for 60cc are concerned, *without excluding the possibility to have other suppliers in the future*, so far we are using both ORS and SKF for OE.

As you understand, the markings done by the suppliers on the bearings are out of our control, and as a matter of fact they are slightly different between the two suppliers:

6204 C4 for ORS

6204 TN9/C4 for SKF (TN9 is their appellation for the plastic cage)

Both the above-mentioned bearings are original.
